Rented driveways and empty parking spaces are leading the drive to end EV charge point anxiety, considered one of the main barriers to mass EV adoption.

It follows a recent official report that has criticised the 'postcode lottery' of electric vehicle charging which urges more action to ensure the charging network is fit for purpose in order to help the Government meet its climate targets.

However, according to the latest figures from online parking platform YourParkingSpace.co.uk, a leading provider of rented driveways and empty parking spaces available to pre-book, it now has more than 6,500 charge point locations - representing more than a third of all available charge point locations in the UK which currently stands at around 16,000.

Harrison Woods, CEO at YourParkingSpace.co.uk, said, "As EVs become the car of choice, we all need to think outside the box when it comes to the EV charging infrastructure to cope with the rising demand.

"Rented driveways and empty off-street parking spaces provide a goldmine of locations that can be offered as EV charging spaces as drivers park their cars, whether it be just for an hour or so, or for a longer stay. The number of these charge points is growing at a rapid pace and provides an immediate alternative to forecourt charging."

Along with 6,500 charge point locations, YourParkingSpace.co.uk also has more than 18,000 EV charge points and more than 31,000 connectors or sockets which can be booked in advance, with up-to-the-minute reliable availability.
